# How to fold an origami boat

1. Fold a square piece of paper in half.

2. Fold each side into the center crease you just made.

3. Fold in half with the loose edges out and rotate.

4. Lay flat and open one page (3 layers on one side and 1 layer on the other), then fold each corner to the center.

5. Fold in half inward then flip it around.
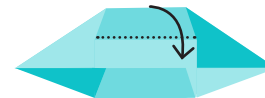

6. Pull open at the two sides.

7. Fold both points inward towards the center until your paper is flat.

8. Now fold both of the small points inwards towards the center and rotate.

9. Pull open and fold each side to the center. This creates a rectangular bottom inside your boat.

10. Adjust the shape until it looks like a boat.

Your new boat!

11. Place your paper boat on the water and set it free.
